

# Water Watch AUDITOR

The Water Watch AUDITOR is a low cost Audit reader designed as a support tool for engineers employed in the commissioning and maintenance of the Water Watch intelligent urinal flush control.

## What is it ?

Every Water Watch maintains a electronic record of its performance. The following parameters are maintained by every Water Watch :-

- Water Watch serial number
- Total Flushes since commissioning
- The number of flushes that were hygiene flushes
- The fill time of the cistern in minutes and seconds
- The number of hours of operation since commissioning
- The flush setting (max. number per hour)
- The hygiene setting (12 or 24 hour)

## How does it work ?

The Auditor comprises of a battery (PP3) operated compact display unit and a connecting cable. No switches or buttons are required. Simply connect the display unit to any operational Water Watch using the interconnecting cable and the AUDITOR will automatically “wake up” take an audit reading and display it on two alternating pages of the display. In addition to the audit parameters the battery voltage (Vb) will be measured and displayed. When the voltage measurement is below 4.0 volts a warning beep will sound to indicate that the battery should be changed. The AUDITOR will continue to show the readings for 45 seconds after disconnecting the cable and then switch the unit off.

Page one of the display :-

<b>Sn 11382 Dy 134</b>
<b>Fl 607 Hy 64</b>

Sn = Water Watch  
Dy = Operating days since commissioning  
Fl = Total flushes  
Hy = Hygiene flushes

Page two of the display :-

<b>Fill Time 3min 7sec</b>
<b>3/hr, 24 hr Vb 4.5</b>

Fill Time = Cistern fill (valve open) time  
Flush and hygiene settings  
Vb = Battery Voltage
